

Darley Air-Powered Primer

Available with Manual or Electronic Control Options

Specifications

Weight

- 10 lbs.

Features

- High-Corrosion Resistance - Brass and stainless-steel components allow this unit to stand up to harsh conditions in both fresh and saltwater applications.
- Few Moving Parts - This system utilizes simple components to make any maintenance quick and easy.
- Control Options - Comes with manual and electronic control options to fit your needs and style. The available control systems come as plug and play solutions for easy installation.
- 12V or 24V - Darley also offers a 12V and 24V rotary vane primer for applications without compressed air.
- Any air primer application requires a compressor capable of outputting at least 15.6 CFM.
- Primer can be used with pumps rated 2000 GPM and smaller.
- NFPA compliant
