

# HOW TO USE

**IN CASE OF ANY TYPE OF VEHICLE FIRE, IMMEDIATELY CALL THE FIREFIGHTERS!**

## BEFORE COVERING ANY VEHICLE:

- Ensure the EV Fire Blanket is appropriate for the size of the vehicle.

- Always prioritize safety. If there is any uncertainty, move to a safe area and leave the task to professional firefighters.

**1 Remove** the EV Fire Blanket from its storage bag or case and take off the belt.

**6 Seal the edges:** Make sure all sides are closed tightly around the vehicle and the blanket is touching the ground.

**2 Unfold the blanket:** **Two people** open the blanket together - with a strong sweep, roll the cover out in opposite directions.

**7 Ensure full coverage:** Spread the blanket completely, with no folds, to suppress oxygen and slow the fire.

**3 Open fully** using the red handles.

**8 Secure in windy conditions:** Anchor the blanket with heavy objects such as sandbags, stones, or similar materials.

**4 Deploy the blanket:** Hold the EV Fire Blanket by the red handles and carefully drape it over the vehicle. Work synchronously around the car.

**9 Step away and monitor:** Move away from the vehicle and wait at least **30 minutes**. Watch for any flare-ups. **Do not remove the blanket.**

**5 Center the blanket:** Use the red indicator tag to align the blanket. The red center marks help position it precisely over the vehicle.

- 10 Firefighters only:** The blanket should only be removed by professional firefighters.
