Jones Riffle Splitter

The Jones Riffle Splitter is also known as a riffler or riffle splitter. It is designed to reduce bulk samples with a relatively large particle size before further preparation or analysis.

Easy to use the sample is poured into the hopper and material flows through a series of equally divided compartments or chutes, sending 50% of the sample to the left side pan and 50% of the sample to the right side pan. It is very easy to clean, with all parts open and easily accessible.

For accurate splitting, slot widths should be three times larger than your largest particle size. Additional rifflers can be stacked giving 1/4 or 1/8 splits.

- Mild Steel standard
- Optional - Stainless steel
- Wide range of slot sizes
- 3 bins per riffler
- Stands available for tiered
- 20 slots standard
- Optional - different number of slots
